

《场论、重正化群和临界现象》

图书基本信息

书名：《场论、重正化群和临界现象》

13位ISBN编号：9787510087708

出版时间：2015-3-1

作者：Daniel J. Amit,Victor Martin Mayor

页数：543

版权说明：本站所提供之下载的PDF图书仅提供预览和简介以及在线试读，请支持正版图书。

《场论、重正化群和临界现象》

内容概要

This volume links field theory methods and concepts from particle physics with those in critical phenomena and statistical mechanics, the development starting from the latter point of view. Rigor and lengthy proofs are trimmed by using the phenomenological framework of graphs, power counting, etc., and field theoretic methods with emphasis on renormalization group techniques. Non-perturbative methods and numerical simulations are introduced in this new edition. Abundant references to research literature complement this matter-of-fact approach. The book introduces quantum field theory to those already grounded in the concepts of statistical mechanics and advanced quantum theory, with sufficient exercises in each chapter for use as a textbook in a one-semester graduate course. The following new chapters are included: I. Real Space Methods II. Finite Size Scaling III. Monte Carlo Methods. Numerical Field Theory

《场论、重正化群和临界现象》

作者简介

David Yevick是国际知名学者，在数学和物理学界享有盛誉。本书凝聚了作者多年科研和教学成果，适用于科研工作者、高校教师和研究生。

《场论、重正化群和临界现象》

书籍目录

Preface

Preface to the Third Edition

General Sources and References

PART BASIC IDEAS AND TECHNIQUES

1 Pertinent concepts and ideas in the theory of critical phenomena

1—1 Description of critical phenomena

1—2 Scaling and homogeneity

1—3 Comparison of various results for critical exponents

1—4 Universality—dimensionality , symmetry

Exercises

2 Formulation of the problem of phase transitions in terms of functional integrals

2—1 Introduction

2—2 Construction of the Lagrangian

2—2—1 The real scalar field

2—2—2 Complexfield

2—2—3 A hypercubic n—vector model

2—2—4 Two coupled fluctuating fields

2—3 The parameters appearing in \mathcal{L}

2—4 The partition function , or the generating functional

2—5 Representation of the Ising model in terms of functional integrals

2—5—1 Definition of the model and its thermodynamics

2—5—2 The Gaussian transformation

2—5—3 The free part

2—5—4 Some properties of the free theory—a free Euclidean field theory in less than four dimensions

2—6 Correlation functions including composite operators

Exercises

3 Functional integrals in quantum field theory

3—1 Introduction

3—2 Functional integrals for a quantum—mechanical system with one degree of freedom

3—2—1 Schwinger's transformation function

3—2—2 Matrix elements—Green functions

3—2—3 The generating functional

3—2—4 Analytic continuation in time—the Euclidean theory

3—3 Functional integrals for the scalar boson field theory

3—3—1 Introduction

3—3—2 The generating functional for Green functions

3—3—3 The generating functional as a functional integral

3—3—4 The S—matrix expressed in terms of the generating functional

Exercises

4 Perturbation theory and Feynman graphs

4—1 Introduction

4—2 Perturbation expansionin coordinate space

4—3 The cancellation of vacuum graphs

4—4 Rules for the computation ofgraphs

4—5 More general cases

4—5—1 The M—vector theory

4—5—2 Comments on fields with higher spin

《场论、重正化群和临界现象》

- 4—6 Diagrammatic expansion in momentum space
- 4—7 Perturbation expansion of Green functions with composite operators
- 4—7—1 In coordinate space
- 4—7—2 In momentum space
- 4—7—3 Insertion at zero momentum

Exercises

- 5 Vertex functions and symmetry breaking
- 5—1 Introduction
- 5—2 Connected Green functions and their generating functional
- 5—3 The mass operator
- 5—4 The Legendre transform and vertex functions
- 5—5 The generating functional and the potential
- 5—6 Ward—Takahashi identities and Goldstone's theorem
- 5—7 Vertex parts for Green functions with composite operators

Exercises

- 6 Expansions in the number of loops and in the number of components
- 6—1 Introduction
- 6—2 The expansion in the number of loops as a power series
- 6—3 The tree (Landau—Ginzburg) approximation
- 6—4 The one—loop approximation and the Ginzburg criterion
- 6—5 Mass and coupling constant renormalizationin the one—loop approximation
- 6—6 Composite field renormalization
- 6—7 Renormalization of the field at the two—loop level
- 6—8 The $O(M)$ —symmetric theory in the limit of large M
- 6—8—1 Generalremarks
- 6—8—2 The origin of the M —dependence of the coupling constant
- 6—8—3 Faithful representation of graphs and the dominant terms in (4)
- 6—8—4 (2) in the infinite M limit
- 6—8—5 Renormalization
- 6—8—6 Broken symmetry

Appendix 6—1 The method of steepest descent and the loop expansion

Exercises

- 7 Renormalization
- 7—1 Introduction
- 7—2 Some considerations concerning engineering dimensions
- 7—3 Power counting and primitive divergences
- 7—4 Renormalization of a cutoff 4 theory
- 7—5 Normalization conditions for massive and massless theories
- 7—6 Renormalization constants for a massless theory to order two loops
- 7—7 Renormalization away from the critical point
- 7—8 Counterterms
- 7—9 Relevant and irrelevant operators
- 7—10 Renormalization of a 4 theory with an $O(M)$ symmetry
- 7—11 Ward identities and renormalization
- 7—12 Iterative construction of counterterms

Exercises

- 8 The renormalization group and scaling in the critical region
- 8—1 Introduction
- 8—2 The renormalization group for the critical (massless) theory

《场论、重正化群和临界现象》

- 8—3 Regularization by continuation in the number of dimensions
- 8—4 Massless theory below four dimensions—the emergence of
- 8—5 The solution of the renormalization group equation
- 8—6 Fixed points , scaling , and anomalous dimensions
- 8—7 The approach to the fixed point—asymptotic freedom
- 8—8 Renormalization group equation above T_c —identification of ν
- 8—9 Below the critical temperature—the scaling form of the equation of state
- 8—10 The specific heat—renormalization group equation for an additively renormalized vertex
- 8—11 The Callan—Symanzik equations
- 8—12 Renormalization group equations for the bare theory
- 8—13 Renormalization group equations and scaling in the infinite M limit

Appendix 8—1 General formulas for calculating Feynman integrals

Exercises

- 9 The computation of the critical exponents
- 9—1 Introduction
- 9—2 The symbolic calculation of the renormalization constants and Wilson functions
- 9—3 The expansion of the critical exponents
- 9—4 The nature of the fixed points —universality
- 9—5 Scale invariance at finite cutoff
- 9—6 At the critical dimension —asymptotic infrared freedom
- 9—7 expansion for the Callan—Symanzik method
- 9—8 expansion of the renormalization group equations for the bare functions
- 9—9 Dimensional regularization and critical phenomena
- 9—10 Renormalization by minimal subtraction of dimensional poles
- 9—11 The calculation of exponents in minimal subtraction

Appendix 9—1 Calculation of some integrals with cutoff

- 9—2 One—loop integrals in dimensional regularization
- 9—3 Two—loop integrals in dimensional regularization

Exercises

.....

PART FURTHER APPLICATIONS AND DEVELOPMENTS
