《发热中性粒细胞减少症：传染病》

内容概要

Febrile neutropenia is an oncologic and medical emergency and defined as fever at a neutropenic patient. Fever is defined as higher than 38.3 ° C (101 ° F) or higher than 38.0 ° C (100.4 ° F) for more than one hour, in a patient who has received chemotherapy in the past month [1-3]. Neutropenia is defined by an absolute neutrophil count (ANC) less than 0.5×10^9 cells/L or an ANC less than 1.0×10^9 cells/L with an expected fall to less than 0.5×10^9 cells/L within the next 48 hours [3-5].

书籍目录

FRONT MATTER

1. Introduction
2. Definitions
3. Epidemiology
4. Risk Factors
5. Microbiological Etiology
6. Pathophysiology
7. Clinical Features
8. Laboratory Examination and Diagnosis of Infectious Foci
9. Treatment
10. Prophylaxis and Precautions
11. Prognosis
