## 内容概要

《梦想与挑战：低碳发展在中国(英文)》内容简介：China has made its due contribution to fighting against climate change. The author of this book - as a journalist witnessing the efforts Chinese leaders, such as Premier Wen Jiabao, had delivered at Copenhagen to save the world from a "no-deal" scenario - could not help but include in the collection the true stories of what happened last November and December ahead of another round of negotiation in Cancun. This is also the starting point for the conceptualization of this book. Climate change is not merely a political negotiation affair. For many Chinese, especially those in ecologically fragile regions, it's a life-or-death issue. The stories of those climate witnesses are also the shining parts of this collection.

Improving governance key to green campaign  
Tough road ahead of national energy guiding body  
China's overlooked rural building opportunities  
China calls for responsible investment  
New policy needed to boost rural economy  
Vital element in the China model  
New roles for emerging powers  
Green road does not mean stunted growth  
Time to invest in human resources  
Climate change pushes new urbanization model for China

## 章节摘录

版权页：A top-notch advisory council had given the warning to the Central Government, which was urgently asked to prevent the possibility. The expert panel of China Council for International Cooperation on the Environment and Development had submitted a suggestion package to Chinese Premier Wen Jiabao and listed local governments' poor environmental awareness as a "major risk." "The Central Governments should strengthen inspections to prevent the local governments from taking risks to stabilize economic growth at the cost of environmental protection," the proposed package said. The panel voiced its concern that some local governments were still holding the age-old mindset that higher economic growth was a priority despite the fact that a nationwide campaign to promote sustainable development and harmony had been ongoing for years.
