# 《过程、期限与周期》

## 内容概要

This Festschrift is dedicated to Jan Willem Klop on the occasion of his 60th birthday. The volume comprises a total of 23 scientific papers by close friends and colleagues, written specifically for this book. The papers are different in nature: some report on new research, others have the character of a survey, and again others are mainly expository. Every contribution has been thoroughly refereed at least twice. In many cases the first round of referee reports led to significant revision of the original paper, which was again reviewed. The articles especially focus upon the lambda calculus, term rewriting and process algebra, the fields to which Jan Willem Klop has made fundamental contributions.

## 书籍目录

The Spectra of Words  
On the Undecidability of Coherent Logic  
Lob's Logic Meets the #-Calculus  
A Characterisation of Weak Bisimulation Congruence  
BShm's Theorem, Church's Delta, Numeral Systems, and Ershov Morphisms  
Explaining Constraint Programming  
Sharing in the Weak Lambda-Calculus  
Term Rewriting Meets Aspect-Oriented Programming  
Observing Reductions in Nominal Calculi Via a Graphical Encoding of Processes  
Primitive Rewriting  
Infinitary Rewriting: From Syntax to Semantics  
Reducing Right-Hand Sides for Termination  
Reduction Strategies for Left-Linear Term Rewriting Systems  
Higher-Order Rewriting: Framework, Confluence and Termination  
Timing the Untimed: Terminating Successfully While Being Conservative  
Confluence of Graph Transformation Revisited  
Compositional Reasoning for Probabilistic Finite-State Behaviors  
Finite Equational Bases in Process Algebra: Results and Open Questions  
Skew and w-Skew Confluence and Abstract BShm Semantics  
A Mobility Calculus with Local and Dependent Types  
Model Theory for Process Algebra  
Expression Reduction Systems and Extensions: An Overview  
Axiomatic Rewriting Theory I: A Diagrammatic Standardization Theorem  
Author Index
