#### 内容概要

The notion of collaboration is a generic one that could be applied to nursing practice in any setting, with any type of patient. The nurse-person relationship is the core of nursing practice, however there are many different conceptions of that relationship. Many nursing models subscribe to a relationship that is collaborative in nature even though this might not be labelled as such, nor explicitly described. One of the few nursing models that has elaborated on this concept of collaboration is the McGill Model of Nursing. This model of nursing has gained in popularity because its orientation fits very well with many of the current trends in health care. There has been a growing demand for further elaboration of the McGill Model concepts and how they play out in practice. The notion of collaboration was first described almost thirty years ago and since then graduates, faculty and students have further developed these ideas in their practice and teaching. Many of these practice discoveries have yet to be published. "The Collaborative Partnership Approach to Care: A Delicate Balance, 1e", brings together some of these discoveries by expert clinicians and teachers who use a collaborative approach to care.

#### 作者简介

Laurie N. Gottlieb is a professor at the School of Nursing at McGill University and holds the Flora Madeline Shaw Chair of Nursing there. She is editor of the CJNR (Canadian Journal of Nursing Research). She holds an M.Sc.(A) in nursing and a Ph.D. in developmental psychology. She participated in the original research on the McGill Model of Nursing and has researched, published, and extensively lectured on the model.

#### 书籍目录
