《医学影像Medical Imaging》

内容概要

This new volume in the popular Illustrated Colour Text series explains everything a non-radiologist needs to know about diagnostic imaging. It provides valuable guidance on which radiological tests to order under various circumstances...how to get the best results from the radiology department...how to read and interpret the resultant reports...and what role interventional radiology can play in diagnosis and treatment. Richly illustrated, user-friendly page layouts make this information easy to understand and apply. * Uses a two-page spread to present all of the information on each topic at a glance. * Offers abundant diagrams to clarify important principles. * Presents summary boxes to expedite review.

书籍目录

Musculoskeletal system by Peter Renton Respiratory system by Rakesh Misra and Michael Rubens
Gastrointestinal system by Stuart Taylor and Steven Halligan Genitourinary system by Michael Kellett Central
nervous system by Paul Butler Index
