《远程医疗信息学的全民享用 Univ》

内容概要

The information society is bringing about radical changes in the way people work and interact with each other and with information. There is an obvious need to consolidate progress by means of establishing a common vocabulary and a code of design practice, which addresses the specific challenges posed by universal access. IS4ALL, Information Society for All, is a European Commission funded thematic network that is devoted to consolidating and codifying available knowledge of universal access in the context of health telematics in a principled way. This book reports the most representative findings of the IS4ALL Consortium towards establishing a validated code of universal access practice in health informatics. The book opens with a systematic introduction and then presents a variety of scenario-driven methods and approaches for interactive software design.

书籍目录

Part I Universal Access in Health Telematics Chapter 1 Universal Access Chapter 2 Trends in Health Telematics: Electronic Health Records in an Intelligent and Communicating Environment Chapter 3 Towards a Universal Access Code of Practice in Health TelematicsPart II Reference Scenarios Chapter 4 The HYGIEAnet Reference Scenario Chapter 5 The SPERIGEST Integrated System Chapter 6 The Barmerzige Schwestern Reference Scenario Chapter 7 The ClinicCoach Reference Scenario Chapter 8 WardInHand-Mobile Access to EPRs Chapter 9 Patients and EHRs Tele Home Monitoring Reference Scenario Chapter 10 MediBRIDGE / C-CARE: Remote Access to EPRsPart III Design for All Methods and Their Application Chapter 11 The Universal Access Assessment Workshop (UA2W) Method Chapter 12 Applying the Unified User Interface Design Method in Health Telematics Chapter 13 Using Non-functional Requirements as Design Drivers for Universal Access Chapter 14 Screening Models and Growth Scenarios Chapter 15 W3C-WAI Content Accessibility Auditing Chapter 16 Usability Inspection of the WardInHand Prototype Chapter 17 Multimodal Interfaces - A Generic Design Approach Chapter 18 Role-Adapted Access to Medical Data: Experiences with Model-Based Development Chapter 19 MedicSCORE and the Evaluation of ClinieCoach Chapter 20 Standards Adherence and Compliance Chapter 21 Participatory Insight to Universal Access: Methods and Validation Exercises Chapter 22 IS4ALL Method Base: Choosing Micro-methods and Tailoring to Custom PracticesReferences
