《宇宙的奥秘》

内容概要

We try to use popular terms to introduce research results of modern science. First we will narrate some necessary fundamental knowledge; then we will introduce some realistic observed astronomical results; then we will present the standard model; at last we will introduce some research work and opinions of the author. In this book, only a few mathematics were introduced to enhance the confidence of the reader on the opinions illustrated. Readers can totally skip all the mathematical formulas to understand all the content. Of course, it is far from enough for readers willing to do intensive study. To compensate for this, some reference books were listed in related part. Interested readers can read related references.

《宇宙的奥秘》

作者简介

Bangu Zhang, Department of Physics of Jilin University, Chinese Academy of Sciences Institute, Science Press.

《宇宙的奥秘》

书籍目录
