

《高性能计算的语言与编译器/2004年国》

图书基本信息

书名：《高性能计算的语言与编译器/2004年国际会议录 Languages and Compilers for High Performance Computing》

13位ISBN编号：9783540280095

10位ISBN编号：354028009X

出版社：北京燕山出版社

作者：Eigenmann, Rudolf; Li, Zhiyuan; Midkiff, Samuel P.

页数：486

版权说明：本站所提供下载的PDF图书仅提供预览和简介以及在线试读，请支持正版图书。

内容概要

The LNCS series reports state-of-the-art results in computer science research, development, and education, at a high level and in both printed and electronic form. Enjoying tight cooperation with the R&D community, with numerous individuals, as well as with prestigious organizations and societies, LNCS has grown into the most comprehensive computer science research forum available. The scope of LNCS, including its subseries LNAI and LNBI, spans the whole range of computer science and information technology including interdisciplinary topics in a variety of application fields. The type of material published traditionally includes

- proceedings-(published in time for the respective conference)
- post-proceedings (consisting of thoroughly revised final full papers)
- research monographs (which may be based on outstanding PhD work, research projects, technical reports, etc.)

书籍目录

Experiences in Using Cetus for Source-to-Source Transformations
The LLVM Compiler Framework and Infrastructure Tutorial
An Overview of the Open Research Compiler
Trimaran: An Infrastructure for Research in Instruction-Level Parallelism
Phase-Based Miss Rate Prediction Across Program Inputs
Speculative Subword Register Allocation in Embedded Processors
Empirical Performance-Model Driven Data Layout Optimization
Implementation of Parallel Numerical Algorithms Using Hierarchically Tiled Arrays
A Geometric Approach for Partitioning N-Dimensional Non-rectangular Iteration Spaces
JuliusC: A Practical Approach for the Analysis of Divide-and-Conquer Algorithms
Exploiting Parallelism in Memory Operations for Code Optimization
An ILP-Based Approach to Locality Optimization
A Code Isolator: Isolating Code Fragments from Large Programs
The Use of Traces for Inlining in Java Programs
A Practical MHP Information Analysis for Concurrent Java Programs
Efficient Computation of Communicator Variables for Programs with Unstructured Parallelism
Compiling High-Level Languages for Vector Architectures
HiLO: High Level Optimization of FFTs
Applying Loop Optimizations to Object-Oriented Abstractions Through General Classification of Array Semantics
MSA: Multiphase Specifically Shared Arrays
Supporting SQL-3 Aggregations on Grid-Based Data Repositories
Supporting XML Based High-Level Abstractions on HDF5 Datasets: A Case Study in Automatic Data Virtualization
Performance of OSCAR Multigrain Parallelizing Compiler on SMP Servers
Author Index

《高性能计算的语言与编译器/2004年国》
