《中医诊断学-英文版》

内容概要

《中医诊断学》内容简介：Acting as a bridge between the basic theory of Chinese medicine (CM) and various clinical subjects Diagnostics in Chinese Medicine can be regarded as a core subject. In understanding the concept of CMB based on the national textbooks of CM in China, Diagnostics in Chinese Medicine is written combined with the National Elaborate Course given by Professor Chen Jiaxu at Beijing University of CM. According to Professor Chen's long standing high academic and clinical practice, figures and tables are presented clearly to intensify understanding and comprehension. In addition, 222 typical pictures for inspection (fongue) examination are included in the DVD to help understanding and teaching. Comprehensive and in-depth explanation as well as training course for application of four diagnostic methods and various methods for pattern differentiation. Numerous figures and tables help present ideas simply and logically. Case records writing for initial students. Pictures contained in DVD to help understanding and teaching.

章节摘录

版权页：插图：Hoarseness or aphonia in chronic disease pertains to deficiency patterns due to internal damage of the essential qi, yin deficiency of the lung and kidney or deficient fire scorching the lung, all of which cause insufficiency of fluid and impairment of the lung in producing a normal voice ; such a pathological condition is known as “ broken metal failing to sound ” .Hoarseness or aphonia may be caused by shouting with rage , screaming or prolonged raising of the voice , which impairs both qi and yin and deprives the throat of moisture.Hoarseness or aphonia at the advanced stage of pregnancy, which is called 。 。 loss of voice during pregnancy , is due to the foetus interfering with the collaterals , which prevents the kidney essence from being transported upwards ; it will heal spontaneously after delivery. C.Snoring : Snoring means the rattling noise produced by the nose and throat during sleep or coma, which is mostly due to partial obstruction of the respiratory passages.Snoring during sleep is often caused by chronic diseases of the nose or improper posture during sleep.However, it is not always an abnormal state ; it can frequently be observed in obese or elderly people.The person in deep slumber with incessant snoring is mostly due to coma and qi dashing out of the respiratory tract ; it is often a critical sign as heat is attacking the pericardium or wind ‘ strike entering the zang organs. D.Groaning : Groaning is an utterance expressing pain or disapproval.The persistent groaning of the patient is often due to pain or a distending sensation that is difficult to bear.The high pitched and strong groan pertains to excessive patterns , whilst the low pitched and weak groan pertains to deficiency patterns.According to the changes in demeanor of a patient seen in clinic it is possible to distinguish the location of the pain.For instance , if the patient is frowning and groaning they may be suffering from a headache ; touching the cheek and groaning is mostly due to toothache ; protecting the heart or abdomen and groaning will be associated with chest pain or abdominal pain ; inability to walk , touching the waist or legs and groaning is mostly due to lumbago or arthritis.
