#### 内容概要

《中关村的创新故事(英文版)》以英文形式讲述了了中关村的创新故事。一提起中关村很多人都会称它为中国的"硅谷",因为这里聚集着包括信息产业在内的众多高新技术企业,是我国规模最大的高科技园区。20多年前,中关村还是一个名副其实的"村",有田、有菜、有小路。从当年的中关村电子一条街到今天的一区七园,在中关村的发展历程中,"自主创新"一直是一个不可或缺的关键词。

#### 章节摘录

插图: facing fierce competition with IBM, Compaq, and AST.However, Legend did not fare well in the market, as itwas a novice. Legend was not even on 1991 list of Chi-na's top 10 PC-makers by sales. Although Legend'smonthly sales of 100,000 computer main boards in theoverseas market pleased officials with the Ministry of Machinery and Electronics, they favored large-scaleState-owned enterprises such as Great Wall and Tide. At the beginning, in a bid to protect the homegrowncomputer industry, the Chinese Government institut-ed high tariffs and a quota system to block the entry offoreign machines. Such protectionism, however, led to the decline of quality of locally produced computers. In 1994, the Chinese Government opened the marketfor foreign PC-makers. This was a serious setback for Legend. A good case in point is that when the Minis-try of Machinery and Electronics decided to scrap themicrocomputer import permit system, it prepared alist of popular domestic brand microcomputers, and Legend was excluded. Liu recalled, "We were caughtcompletely off guard. Foreign machines had betterquality than ours and were even cheaper. We were nomatch for them. For about two months, we held meet-ings every day to discuss possible solutions. We wereinferior to foreign competitors in all aspects—funding, technology, management, and talent. How could wefight the battle? Should we back out or act as an agentdistributing others' products? "

## 编辑推荐

《中关村的创新故事(英文版)》是国情故事系列丛书之一,由冯永锋所编著,五洲传播出版社出版发行的。
