

《企业与信息系统建模分析》

图书基本信息

书名：《企业与信息系统建模分析》

13位ISBN编号：9787040249552

10位ISBN编号：7040249553

出版时间：2009-1

出版社：高等教育出版社

页数：397

版权说明：本站所提供下载的PDF图书仅提供预览和简介以及在线试读，请支持正版图书。

《企业与信息系统建模分析》

前言

The past three decades have witnessed great achievements in many enterprises since the promotion of enterprise integration centering on the Computer Integrated Manufacturing (CIM) among industries. In China, a new term enterprise informationization has evolved to express the application of information technology and information systems to realize integration and attain improvement in the performance of an enterprise. More and more enterprises benefit from informationization. However, not all of them can materialize their expected improvements. The reason can be manifold. Besides, the social impact and the decision-making problem from enterprise management, the lack of proper and effective analysis methods and tools of integration proves to be a major cause. Enterprise integration relates to both enterprise management technology and information technology, dealing with complex management and technological problems. The realization of enterprise integration through information system implementation involves different levels of an enterprise and different professions. It demands cooperation of all staff in order to achieve success. Unfortunately, due to their distinct professional backgrounds and respective limitation in knowledge, staff engaged in the task very often have different interpretation of concepts and data, which may accordingly create misunderstandings in cooperation and lead to various problems during the process of system construction. In many cases these kinds of problems can be fatal. The modeling and analysis of an enterprise and information system adopts standardized syntax and semantics, through the method of simplification, decomposition and normalization. It realizes the description of an enterprise and information system, and provides a framework of the solution to relevant problems in the design, development, implementation, operation, and maintenance of complex enterprises and information systems. It can not only enhance the cooperative capacity of the team but also greatly decrease the time and cost of the design and development of a system.

《企业与信息系统建模分析》

内容概要

《企业与信息系统建模分析:从需求到实现》主要内容：Modeling and Analysis of Enterprise and Information Systems From Requirements to Realization discusses the basic principles of enterprise architecture and enterprise modeling. After an introduction to the field the General Enterprise Modeling Architecture is presented. The new architecture includes a set of models and methods. It describes different aspects of the system and covers its life cycle. Its models are structuralized models with multi-layers and multi-views. They are descriptions and cognitions of the system at the top level and provide tools and methodology to understand, design, develop and implement the system.

This book is intended for researchers and graduate students in the field of industrial engineering, management engineering and information engineering. Enterprise Models discussed in this book provide a rich source in enterprise diagnosis, business process reengineering and information system implementation.

书籍目录

Part One Modeling Frameworks of Enterprise and Information Systems	1
1 Introduction to Enterprise and System Modeling	1.1
1.1 What Do "Analysis" and "Design" for an Enterprise Mean	1.2
1.2 What is a Model	1.3
1.3 Purpose and Usage of Models	1.4
1.4 Content of a Model	1.5
1.5 Viewpoints and Abstract Levels of a Model	1.6
1.6 Modeling Methods Families	1.7
1.7 Model Based System Integration and Model Driven Architecture	References
2 Enterprise and Information System Architectures	2.1
2.1 Purposes of System Architectures	2.2
2.2 Computer Integrated Manufacturing--Open System Architecture	2.3
2.3 GRAI Integration Methodology and IMPACS	2.4
2.4 Purdue Enterprise Reference Architecture	2.5
2.5 Architecture of Integrated Information System	2.6
2.6 Zachman Framework	2.7
2.7 Generalized Enterprise—Reference Architecture and Methodologies	2.8
2.8 Stair-Like CIM System Architecture	2.9
2.9 Basic Elements Analysis of System Architectures	2.10
2.10 General Enterprise Modeling Architecture	References
3 System Development and Integration Methodology	3.1
3.1 Role of Methodology in Enterprise and System Integration	3.2
3.2 Structured Methodology	3.3
3.3 Object-Oriented Methodology	3.4
3.4 GEM Structured Approach	3.5
3.5 Interview Original Data Collection for a Modeling Task	References
Part Two Function Oriented Modeling and Analysis	4
4 Data Flow Diagram	4.1
4.1 Introduction to DFD	4.2
4.2 Syntax and Semantics of DFD	4.2.1
4.2.1 Notations of DFD	4.2.2
4.2.2 DFD Models Organization	4.2.3
4.2.3 Data Dictionary	4.3
4.3 Structured Approach of DFD	4.3.1
4.3.1 Modeling Process of DFD	4.3.2
4.3.2 Data Flow Diagramming Rules	4.4
4.4 DFD Modeling Case	References
5 IDEF0 Function Modeling	5.1
5.1 Introduction to IDEF0	5.2
5.2 Syntax and Semantics of IDEF0	5.2.1
5.2.1 Basic Concepts and Rules of IDEF0	5.2.2
5.2.2 IDEF0 Diagrams	5.3
5.3 Structured Approach of IDEF0	5.4
5.4 IDEF0 Modeling Case	References
Part Three Data Oriented Modeling and Analysis	6
6 Entity-Relationship Diagram	6.1
6.1 Introduction to Entity-Relationship Diagram	6.2
6.2 Syntax and Semantics of ERD	6.2.1
6.2.1 Entity	6.2.2
6.2.2 Attribute	6.2.3
6.2.3 Relationship	6.3
6.3 Data Analysis and Normalization	6.3.1
6.3.1 1st Normal Form (1NF)	6.3.2
6.3.2 2nd Normal Form (2NF)	6.3.3
6.3.3 3rd Normal Form (3NF)	6.4
6.4 Structured Approach and Modeling Case of ERD	References
7 IDEFIX Data Modeling	7.1
7.1 Introduction to IDEFIX	7.2
7.2 Syntax and Semantics of IDEFIX	7.2.1
7.2.1 Entity	7.2.2
7.2.2 Relationship	7.2.3
7.2.3 Attribute	7.3
7.3 Structured Approach of IDEFIX	7.3.1
7.3.1 Phase Zero: Project Initiation	7.3.2
7.3.2 Phase One: Entity Definition	7.3.3
7.3.3 Phase Two: Relationship Definition	7.3.4
7.3.4 Phase Three: Key Definition	7.3.5
7.3.5 Phase Four: Attribute Definition	References
Part Four Process Oriented Modeling and Analysis	8
8 IDEF3 Process Capture Method	8.1
8.1 Introduction to IDEF3	8.2
8.2 Syntax and Semantics of IDEF3	8.2.1
8.2.1 Basic Concepts of IDEF3	8.2.2
8.2.2 Process Diagram	8.2.3
8.2.3 Object Diagram	8.3
8.3 Structured Approach of IDEF3	References
9 Other Kinds of Process Modeling Methods	9.1
9.1 Event-Driven Process Chain	9.2
9.2 Gantt Chart and PERT	9.3
9.3 Role Activity Diagram	9.4
9.4 Petri Net	9.5
9.5 GRAI Method	9.6
9.6 Business Process Modeling Notation	References
Part Five Object Oriented Modeling and Analysis	10
10 IDEF4 Object-Oriented Design Method	10.1
10.1 Introduction to IDEF4	10.2
10.2 Syntax and Semantics of IDEF4	10.2.1
10.2.1 IDEF4 Object-Oriented Concepts	10.2.2
10.2.2 Static Model	10.2.3
10.2.3 Behavior Model	10.2.4
10.2.4 Dynamic Model	10.3
10.3 Structured Approach of IDEF4	References
11 Unified Modeling Language	11.1
11.1 Introduction to UML	11.2
11.2 Syntax and Semantics of UML	11.2.1
11.2.1 Static View	11.2.2
11.2.2 Design View	11.2.3
11.2.3 Use Case View	11.2.4
11.2.4 State Machine View	11.2.5
11.2.5 Activity View	11.2.6
11.2.6 Interaction View	11.2.7
11.2.7 Deployment View	11.2.8
11.2.8 Model Management View	11.2.9
11.2.9 Profiles	11.3
11.3 Structured Approach of UML	References
Part Six Enterprise Modeling Techniques New Development	12
12 Ontology Capture Methods	12.1
12.1 Introduction to Ontology and IDEF5	12.2
12.2 Syntax and Semantics of IDEF5	12.2.1
12.2.1 Basic Concepts of IDEF5	12.2.2
12.2.2 First-Order Schematic	12.2.3
12.2.3 Second-Order Schematic	12.2.4
12.2.4 Relation Schematic	12.2.5
12.2.5 Object State Schematic	12.3
12.3 Structured Approach of IDEF5	12.4
12.4 Subject-Oriented Knowledge Formalization	References
13 Economic View and Performance Modeling	13.1
13.1 Introduction to Economic View and Performance Modeling	13.2
13.2 Framework of Economic View	13.3
13.3 Enterprise Information System Project Selection	13.3.1
13.3.1 Decision Method	13.3.2
13.3.2 Decision Modeling	13.3.3
13.3.3 ANP Application	13.3.4
13.3.4 Sensitivity Analysis	13.4
13.4 Fuzzy Performance Modeling and Measurement	13.4.1
13.4.1 Performance Model Structure and Multi-indicators Hierarchy	13.4.2
13.4.2 Fuzzy Performance Modeling Framework	13.4.3
13.4.3 Knowledge Management of Fuzzy Performance Modeling	13.4.4
13.4.4 Fuzzy Performance Measurement	13.4.5
13.4.5 Case Study	References
14 Models Management, Implementation and Integration	14.1
14.1 Business Process Models Management and Reuse	14.1.1
14.1.1 Challenges in Business Process Models Management	14.1.2
14.1.2 Business Process Models Management System	14.1.3
14.1.3 Models	

《企业与信息系统建模分析》

Classification and Retrieval in BPMMS 14.2 Evaluation Indicators System Refining 14.2.1 Knowledge Reuse of Evaluation Indicators System 14.2.2 Structural Similarity of Evaluation Indicators System 14.2.3 Refining Mechanism of Evaluation Indicators System 14.2.4 Case Study 14.3 Model Based Project and Process Management Integration 14.4 Modeling for Product Information Tracking and Feedback 14.4.1 Modeling from the System Level 14.4.2 Modeling from the Process Level 14.4.3 Modeling from the Information and Data Level 14.4.4 Dynamic Information Acquisition and Processing with Wireless Technology 14.4.5 Case Study 14.5 Enterprise Modeling Based Services Development 14.5.1 Service Modeling Language 14.5.2 Service Modeling Process 14.5.3 Case Study ReferencesIndex

章节摘录

插图：The connection relationship is also named as parent-child relationship. It is an association between entities in which each instance of the parent entity is associated with zero, one, or more instances of the child entity, and each instance of the child entity is associated with zero or one instance of the parent entity. For instance, a connection relationship would exist between the entities SUPERVISOR and STUDENT, if a supervisor can guide zero, one, or more students and each student can be guided by zero or one supervisor. A specific instance of the relationship associates specific instances of the entities. For instance, "Qing Li is the supervisor of Cheng Wang" is an instance of the relationship. The connection relationship may be further defined by specifying the cardinality of the relationship. Within IDEF1X, the following relationship cardinalities can be expressed from the viewpoint of the parent entity.
