章节摘录

Sally: Many scientists say that pollution is a growing problem around the world. In 100 years, I think there will be more pollution, especially in the cities. There will be more people, more cars, and bigger cities. And there will also be fewer trees and animals. Joe: But technology is becoming so advanced. I think technology will help clean up the pollution problem. In 100 years, I think there will be less pollution. Also people will do things electronically. For example, I think there will be less paper money and more credit cards. Also, there will be robots to help them do their work so people will have more leisure time. They won't have to work such long hours and they will be able to spend more time with their families and pets. Ming: Hmm. In 100 years, I think there will be robots in people's homes, but I think people will still have less leisure time. People will work more at the office. Also, I don't think there will be enough houses in the cities so some people will have to live in space — in apartments on the moon or other planets. There are Exploration Rovers landing on Mars now. I think in 100 years, rockets will be flying to space stations on Mars.
