

# 《实分析和概率论》

## 图书基本信息

书名：《实分析和概率论》

13位ISBN编号：9787111193487

10位ISBN编号：7111193482

出版时间：2006-7

出版社：机械工业出版社

作者：达德利

页数：555

版权说明：本站所提供下载的PDF图书仅提供预览和简介以及在线试读，请支持正版图书。

# 《实分析和概率论》

## 内容概要

这是一本广受称赞的教科书，清晰地讲解了现代概率论以及度量空间与概率测度之间的相互作用。本书分两部分，第一部分介绍了实分析的内容，包括基本集合论、一般拓扑学、测度论、积分法、巴拿赫空间和拓扑空间中的泛函分析导论、凸集和函数、拓扑空间上的测度等。第二部分介绍了基于测度论的概率方面的内容，包括大数律、遍历定理、中心极限定理、条件期望、鞅收敛等。另外，随机过程一章(第12章)还介绍了布朗运动和布朗桥。

与前版相比，本版内容更完善，一开始就介绍了实数系的基础和泛代数中的一致逼近的斯通-魏尔斯特拉斯定理；修订和改进了几节的内容，扩充了大量历史注记；增加了很多新的习题，以及对一些习题的解答的提示。

## 作者简介

## 书籍目录

Preface to the Cambridge Edition  
 1 Foundations; Set Theory  
 1.1 Definitions for Set Theory and the Real Number System  
 1.2 Relations and Orderings\* 1.3 Transfinite Induction and Recursion  
 1.4 Cardinality  
 1.5 The Axiom of Choice and Its Equivalents  
 2 General Topology  
 2.1 Topologies, Metrics, and Continuity  
 2.2 Compactness and Product Topologies  
 2.3 Complete and Compact Metric Spaces  
 2.4 Some Metrics for Function Spaces  
 2.5 Completion and Completeness of Metric Spaces\*  
 2.6 Extension of Continuous Functions\*  
 2.7 Uniformities and Uniform Spaces\*  
 2.8 Compactification  
 3 Measures  
 3.1 Introduction to Measures  
 3.2 Semirings and Rings  
 3.3 Completion of Measures  
 3.4 Lebesgue Measure and Nonmeasurable Sets\*  
 3.5 Atomic and Nonatomic Measures  
 4 Integration  
 4.1 Simple Functions\*  
 4.2 Measurability  
 4.3 Convergence Theorems for Integrals  
 4.4 Product Measures\*  
 4.5 Daniell-Stone Integrals  
 5  $L_p$  Spaces; Introduction to Functional Analysis  
 5.1 Inequalities for Integrals  
 5.2 Norms and Completeness of  $L_p$   
 5.3 Hilbert Spaces  
 5.4 Orthonormal Sets and Bases  
 5.5 Linear Forms on Hilbert Spaces, Inclusions of  $L_p$  Spaces, and Relations Between Two Measures  
 5.6 Signed Measures  
 6 Convex Sets and Duality of Normed Spaces  
 6.1 Lipschitz, Continuous, and Bounded Functionals  
 6.2 Convex Sets and Their Separation  
 6.3 Convex Functions\*  
 6.4 Duality of  $L_p$  Spaces  
 6.5 Uniform Boundedness and Closed Graphs\*  
 6.6 The Bmnn-Minkowski Inequality  
 7 Measure, Topology, and Differentiation, 7.1 Baire and Borel  $\sigma$ -Algebras and Regularity of Measures\*  
 7.2 Lebesgues Differentiation Theorems\*  
 7.3 The Regularity Extension\*  
 7.4 The Dual of  $C(K)$  and Fourier Series\*  
 7.5 Almost Uniform Convergence and Lusins Theorem  
 8 Introduction to Probability Theory  
 8.1 Basic Definitions  
 8.2 Infinite Products of Probability Spaces  
 8.3 Laws of Large Numbers\*  
 8.4 Ergodic Theorems  
 9 Convergence of Laws and Central Limit Theorems  
 9.1 Distribution Functions and Densities  
 9.2 Convergence of Random Variables  
 9.3 Convergence of Laws  
 9.4 Characteristic Functions  
 9.5 Uniqueness of Characteristic Functions and a Central Limit Theorem  
 9.6 Triangular Arrays and Lindebergs Theorem  
 9.7 Sums of Independent Real Random Variables\*  
 9.8 The Levy Continuity Theorem; Infinitely Divisible and Stable Laws  
 10 Conditional Expectations and Martingales  
 10.1 Conditional Expectations  
 10.2 Regular Conditional Probabilities and Jensens Inequality  
 10.3 Martingales  
 10.4 Optional Stopping and Uniform Integrability  
 10.5 Convergence of Martingales and Submartingales\*  
 10.6 Reversed Martingales and Submartingales\*  
 10.7 Subadditive and Superadditive Ergodic Theorems  
 11 Convergence of Laws on Separable Metric Spaces  
 11.1 Laws and Their Convergence  
 11.2 Lipschitz Functions  
 11.3 Metrics for Convergence of Laws  
 11.4 Convergence of Empirical Measures  
 11.5 Tightness and Uniform Tightness\*  
 11.6 Strassens Theorem: Nearby Variables With Nearby Laws\*  
 11.7 A Uniformity for Laws and Almost Surely Converging Realizations of Converging Laws\*  
 11.8 Kantorovich-Rubinstein Theorems\*  
 11.9 U-Statistics  
 12 Stochastic Processes  
 12.1 Existence of Processes and Brownian Motion  
 12.2 The Strong Markov Property of Brownian Motion  
 12.3 Reflection Principles, The Brownian Bridge, and Laws of Suprema  
 12.4 Laws of Brownian Motion at Markov Times: Skorohod Imbedding  
 12.5 Laws of the Iterated Logarithm  
 13 Measurability: Borel Isomorphism and Analytic Sets\*  
 13.1 Borel Isomorphism\*  
 13.2 Analytic Sets  
 Appendix A Axiomatic Set Theory  
 A.1 Mathematical Logic  
 A.2 Axioms for Set Theory  
 A.3 Ordinals and Cardinals  
 A.4 From Sets to Numbers  
 Appendix B Complex Numbers, Vector Spaces, and Taylors Theorem with Remainder  
 Appendix C The Problem of Measure  
 Appendix D Rearranging Sums of Nonnegative Terms  
 Appendix E Pathologies of Compact Nonmetric Spaces  
 Author Index  
 Subject Index  
 Notation Index

# 《实分析和概率论》

## 媒体关注与评论

本书在两个方面获得了极佳的成功。一是它是一本全面、新颖的实分析教程，二是它是一本数学理论完整和自成体系的概率论教程。本书无疑给出了一种严谨和完整的新标准。——美国数学会公报

这是一本非凡的著作。在教学和参考两个方面本书将成为一本标准化教材，它全面地介绍了实分析的必备知识，且证明贯穿全书。一些主题和证明极少在其他教科书中见到。——爱丁堡数学会学报

严谨，精深，新颖，这是一本适用于数学专业研究生的教材。——ISI的简短书评

## 精彩短评

1、 Good

# 《实分析和概率论》

## 精彩书评

1、MIT的Real Analysis，和Princeton的Stein, E.M., et al.写的各有千秋。Stein的语言风格更通俗易懂，而Dudley的更加Bourbaki。之前也有学长说过这部更适合有基础的同学或者当做字典来用，我同意。当做字典的话，这一部非常精炼，基础知识的介绍也相对完整，有较为充分的篇幅介绍Zermelo Fraenkel体系，每个章节末尾还有背景知识科普。个人感觉这部大作中定理的证明方法，比Walter Rudin的更加归纳化，比Royden的更加演绎化。我喜欢极了这部对于概率论的阐释，逻辑精炼，形式优美，结构安排得当，值得一读。
