前言

Through its reform and opening to the outside world, China has worked an economic miracle and boosted its comprehensive strength, enhancing its standing in the international community. As more and more people around the world are eager to know and understand China, we have compiled the China Series, aiming to provide a shortcut for readers to get the basic facts about this country. The 12 titles in this series cover China's geography; history; politics, economy; culture, law, diplomacy, national defense, and society; as well as its science, technology and education; its environment; and its ethnic groups and religions. These writings will help readers acquire a basic knowledge of China. It is our hope that this series will enable readers to get a general idea about China: Chinese history; culture and civilization, which is the oldest continuous major civilization in the world; China's basic conditions—the world's largest developing country with a huge population, a country that is developing unevenly on a poor economic base; in light of these conditions, China is following its own path to sustainable development while learning from other civilizations; and China's future—led by the Chinese Communist Party. The Chinese people are focusing their efforts on economic development and carrying on reform and opening-up; they are building a harmonious society in their own country and working for a harmonious world with lasting peace and common prosperity. We expect that through these books our readers will begin a new journey of discovery—'understanding China.

《中国环境》

内容概要

《中国环境(英文版)》内容简介：As the developing country with the largest population in the world, China has a vast expanse of territory and complex natural conditions such as climate and topography. Since late 1970s, Chinese economy has been developing continuously and fast, and environment and resources have gradually become the important problems confronted by China. Meanwhile, China's unique population problem and natural conditions push China to the severe challenge of environmental protection. China has always been attaching great importance on environmental protection and construction, and established it as one basic state policy after the reform and opening-up in 1978. Through a series of important strategic measures, China strengthens environmental protection and construction. Solve the environment problems in China not only conform to the development goals of China, but also greatly embody the common benefits of all human beings. Through a series of environment laws and concrete implementation measures, China promotes environmental protection by laws and achieves remarkable results.

书籍目录

Preface
