EIGHT Vocabulary phrases and Expressions 附录1 附录2

章节摘录

1 Nature is never silent. As well as the general background of water , wind and weather , unique sounds are added by living creatures. There are a huge variety of calls and the more melodic ones have even inspired composers. But instead of just copying their musical qualities-what about actually using the animals themselves as musicians ?

2 Obviously , they wont play on request , but by putting a whole range of animal calls into an electronic sampler , British composer Nick is sure he can build up a wildlife orchestra , which will respond to the touch of a button. Take the strings for instance.

3 Grasshoppers not only produce string-like sounds , but also make music in a similar way to violinists and cellists. But their bow is a row of pegs on their legs , and veins in their wings take the

4 There is a kind of gremlin-like creature called aye-ae. It uses its long middle finger to tap branches to find cavities , where grubs and insects hide out. It may not have the best table manners , but this strange looking creature is certainly a very adept and unusual percussionist , which should help provide Nick with a good idea.

5 Nicks now got a good selection of percussionists to really get the beat going. Now hes got his wind instrumentalists he heeds.

6 In summer , during the breeding season the male toad fish finds a nest pool and at night when the tide is in hums to attract a female. Once a male is settled , hes introduced to a female , and soon digs himself in to start humming his love song by vibrating his swim bladder——about a hundred times a second.

7 The alligators more recently evolved relatives , the birds , have more complex songs. Birds often sound flute-like. They really are more songsters than wind instrumentalists. Even so , because of their trilling sound , Nick is including them in his wind section , which is already sounding quite melodious.
