

《定量化学分析》

图书基本信息

书名：《定量化学分析》

13位ISBN编号：9787301156599

10位ISBN编号：7301156596

出版时间：2009-10

出版社：北京大学

作者：李娜//李克安

页数：308

版权说明：本站所提供下载的PDF图书仅提供预览和简介以及在线试读，请支持正版图书。

《定量化学分析》

前言

This text brings together the individuals and the desire to develop a text for undergraduate students who have English as a second language. Our initial focus was undergraduate students with chemistry major in the College of Chemistry and Molecular Engineering, Peking University, Beijing, China, but now we hope and expect that other undergraduate students may be able to learn more easily with this text as they cope with the English language and the essentials of analytical chemistry. Lecture Series Leading to Text: The one semester course in analytical chemistry in English for undergraduate students was initiated by Professor Li Ke'an in February 2005 with Dr. Li Na as the presenter of one 2 hour lecture each week for 15 weeks. The size of the lecture room limited the number of students to 50. Each year the students prepare presentations of their science project reports. The audience of their peers grades the oral presentations of those students who volunteered and were selected to give oral presentations. Competition for being included among the oral presenters has been impressive. Student discussion, grading of the presenters and the presentations bring forth a profound bonding. Each of us in the lecture room feels the shoes worn by another. As we introduced different examples and illustrations to the lecture series, these quickly became ideas for the coming analytical chemistry text. In Chapter 1, "the Human Genome Project" was used to show the power and success possible when analytical chemists join forces to bring the minds and resources of the academic community to focus on a goal. The project is indeed a road map of problem solving using new and different technologies plus automation to resolve analytical roadblocks to meet the time constraints of the Genome Project thus opening research opportunities for decades. A global environmental need brought together another group of scientists in the concluding Chapter 10 to address the ever present need to monitor drinking water contamination throughout the world. We selected arsenic as one example of the world-wide need for simple, sensitive, cost effective analytical methods to monitor drinking water.

《定量化学分析》

书籍目录

CHAPTER 1 INTRODUCTION OF ANALYTICAL CHEMISTRY		1.1 What is Analytical Chemistry	2	1.2 Steps in the Development of an Analytical Method	5	1.3 Classification of Quantitative Analytical Methods	7	
1.3.1 Chemical Analysis		7	1.3.2 Instrumental Analysis		8	1.4 Principles of Volumetric Titration		8
1.4.1 Basic Terms		9	1.4.2 Requirements of Titration Reactions		9	1.4.3 Classification of Titration Processes		10
1.4.4 Primary Standards and Standard Solutions		10	1.4.5 Basic Apparatus in Chemical Analyses		11	1.5 Calculations in Volumetric Titration		15
1.5.1 Preparation of Standard Solutions		15	1.5.2 Titration Results		18	CHAPTER 2 DATA ANALYSIS		22
2.1 Error and Classification		23	2.1.1 Accuracy and Precision		23	2.1.2 Errors and Deviation		24
2.1.3 Systematic and Random Errors		25	2.2 Distribution of Random Errors		26	2.2.1 Frequency Distribution		27
2.2.2 Normal Distribution		28	2.2.3 Predicting the Probability of Random Errors--Area under Gaussian Curve		30	2.3 Statistical Data Treatment		31
2.3.1 Estimation of Population Mean (μ) and Population Standard Deviation (σ)		31	2.3.2 Confidence Interval for Population Mean		34	2.3.3 Statistical Aids to Hypothesis Testing		37
2.3.4 Detection of Gross Errors		42	2.4 Propagation of Error		43	2.4.1 Systematic Errors		43
2.4.2 Random Errors (Standard Deviation)		43	2.4.3 Maximum Errors (ER)		44	2.4.4 Distribution of Errors		44
2.5 Significant Figure Convention		45	2.5.1 Significant Figures		45	2.5.2 Numerical Rounding in Calculations		47
CHAPTER 3 ACID-BASE EQUILIBRIUM		50	3.1 Equilibrium Constants and Effect of Electrolytes		51	3.2 Acid-base Reactions and Equilibria		53
3.2.1 Acid and Base--Bronsted Concept		53	3.2.2 Dissociation of Acid or Base and Acid-base Equilibria		55	3.2.3 Magnitude of Dissociating Species at a Given pH : α -values		57
3.3 Solving Equilibrium Calculations Using pH Calculations as an Example		61	3.3.1 General Approaches (Systematic Approaches)		61	3.3.2 pH Calculations		64
3.4 Buffer Solutions		71	3.4.1 pH Calculations of Buffer Solutions		71	3.4.2 Buffer Capacity		72
3.4.3 Preparation of Buffers		74	CHAPTER 4 ACID-BASE TITRATION		78	4.1 Acid/Base Indicators		79
4.1.1 Principle		79	4.1.2 Examples		80	4.1.3 Titration Errors		82
4.1.4 Factors Influencing Performance		82	4.2 Titration Curves and Selection of Indicators		83	4.2.1 Strong Acids (Bases)		83
4.2.2 Monoprotic Acids (Bases)		86	4.2.3 Strong and Weak Acids (Bases)		91	4.2.4 Polyfunctional Weak Acids (Bases)		92
4.2.5 Mixture of Weak Acids (Bases)		95	4.3 Titration Error Calculations		95	4.3.1 Strong Acids (Bases)		95
4.3.2 Monoprotic Weak Acids (Bases)		96	4.3.3 Polyfunctional Acids (Bases)		97	4.4 Preparation of Standard Solutions		98
4.4.1 Standard Acid Solutions		98	4.4.2 Standard Base Solutions		99	4.4.3 The Carbonate Error		100
4.5 Examples of Acid-base Titrations		101	4.5.1 Determination of Total Alkalinity		101	4.5.2 Determination of Nitrogen		102
4.5.3 Determination of Boric Acid		103	4.6 Acid-base Titrations in Non-aqueous Solvents		104	4.6.1 Non-aqueous Solvents		104
4.6.2 Examples of Non-aqueous Titrations		105	CHAPTER 5 COMPLEXATION REACTION AND COMPLEXOMETRIC TITRATION		108	5.1 Complexes and Formation Constants		109
5.1.1 Formation Constants		109	5.1.2 Concentration of ML_n in Complexation Equilibria		111	5.1.3 Ethylenediaminetetraacetic Acid (EDTA) and Metal-EDTA Complexes		113
5.1.4 Side Reaction Coefficients and Conditional Formation Constants in Complexation Reactions		115	5.2 Metallochromic Indicators		122	5.2.1 How a Metallochromic Indicator Works		122
5.2.2 Color Transition Point pM ($(pM)_t$) for Metallochromic Indicators		123	5.2.3 Frequently Used Metallochromic Indicators		125	5.3 Titration Curves and Titration Errors		126
5.3.1 Titration Curves		126	5.3.2 Titration Errors		128	5.3.3 pH Control in Complexometric Titrations		129
5.4 Selective Titrations of Metal Ions in the Presence of Multiple Metal Ions		130	5.4.1 Selective Titration by Regulating pH		131	5.4.2 Selective Titration Using Masking Reagents		133
5.5 Applications of Complexometric Titrations		137	5.5.1 Buffer Selection in Complexometric Titrations		137	5.5.2 Titration Methods and Applications		138
5.5.3 Preparation of Standard Solutions		142	CHAPTER 6 REDOX EQUILIBRIUM AND TITRATION		146	6.1 Standard Electrode Potentials, Formal Potentials and Redox Equilibria		147
6.1.1 Standard Electrode Potentials		147	6.1.2 The Nernst Equation and Formal Potentials		149	6.1.3 Factors Affecting the Formal Potential		150
6.1.4 The Equilibrium Constant of Redox Reaction		154	6.2 Factors Affecting the Reaction Rate		155	6.2.1 Concentrations		156
6.2.2 Temperature		157	6.2.3 Catalysts and Reaction Rate		157	6.2.4 Induced Reaction		157
6.3 Redox Titrations		158	6.3.1					

《定量化学分析》

Constructing Redox Titration Curves	158	6.3.2 Indicators	162	6.3.3 Auxiliary Oxidizing and Reducing Agents	164
6.4 Examples of Redox Titrations	165	6.4.1 Potassium Permanganate (KMnO ₄)	165	6.4.2 Potassium Dichromate (K ₂ Cr ₂ O ₇)	168
6.4.3 Iodine: Iodimetry and Iodometry	169	6.4.4 Potassium Bromate (KBrO ₃)	173	6.4.5 Ceric Sulfate (Ce(SO ₄) ₂)	174
CHAPTER 7 PRECIPITATION EQUILIBRIUM, TITRATION, AND GRAVIMETRY 177					
7.1 Precipitation Equilibria and Solubility	178	7.1.1 Solubility of Precipitates in Pure Water	178	7.1.2 Ionic Strength and the Solubility of Precipitates	178
7.1.3 Common Ion and the Solubility of Precipitates	179	7.1.4 pH and the Solubility of Precipitates	179	7.1.5 Complexing Agents and the Solubility of Precipitates	182
7.2 Precipitation Titrations	184	7.2.1 Titration Curves	184	7.2.2 Examples of Methods Classified by Endpoint Indication	186
7.2.3 Preparation of Standard Solutions	189	7.3 Precipitation Gravimetry	190	7.3.1 Classification of Gravimetric Methods of Analysis	190
7.3.2 General Procedure and Requirements for Precipitation	190	7.3.3 Precipitate Formation	192	7.3.4 Obtaining High Purity Precipitates	193
7.3.5 Experimental Considerations	197	7.3.6 Examples of Organic Precipitating Reagents	200	CHAPTER 8 SPECTROPHOTOMETRY 206	
8.1 Principle of Spectrochemical Analysis	207	8.1.1 Properties of Electromagnetic Radiation	207	8.1.2 Interaction of Electromagnetic Radiation with Matter	208
8.1.3 Beer's Law, the Quantitative Principle of Light Absorption	213	8.1.4 Limitations to Beer's Law	216	8.2 Principles of Instrumentation	217
8.2.1 Instrumentation	217	8.2.2 Instrumental Errors in Absorption Measurement	226	8.3 Applications of Spectrophotometry	226
8.3.1 Single Component Analyses	226	8.3.2 Multicomponent Analyses	228	8.3.3 Spectrophotometric Titrations	230
8.3.4 Studies of Complex Formation in Solutions	231	8.3.5 Measurements of Dissociation Constants of Organic Acids/Bases	233	CHAPTER 9 INTRODUCTION TO ANALYTICAL SEPARATION 238	
9.1 General Considerations of Separation Efficiency	239	9.2 Separation by Precipitation	241	9.2.1 Inorganic Precipitants	241
9.2.2 Organic Precipitants	242	9.2.3 Coprecipitation of Species in Trace Amounts for Separation	243	9.2.4 Improving the Selectivity of Precipitation Separation	244
9.3 Separation by Extraction	245	9.3.1 Principles for Liquid-liquid Extraction	245	9.3.2 Percent Extraction	247
9.3.3 Extraction of Inorganic Species	249	9.3.4 Other Extraction Methods	254	9.4 Separation by Ion Exchange	257
9.4.1 Ion Exchange Resins	257	9.4.2 Cross-linkage and Exchange Capacity	259	9.4.3 Ion Exchange Equilibria	260
9.4.4 Applications of Ion Exchange Separation	261	9.5 Separation by Chromatography	263	9.5.1 Classification	263
9.5.2 Chromatogram	264	9.5.3 Column Chromatography	265	9.5.4 Planar Chromatography	266
CHAPTER 10 SOLVING A REAL ANALYTICAL PROBLEM 271					
10.1 Definition of the Analytical Problem	272	10.2 Literature Review	273	10.3 Choosing a Method	275
10.4 Developing and Evaluating the Method	276	10.4.1 Selectivity	276	10.4.2 Accuracy	277
10.4.3 Sensitivity and Linear Dynamic Range	279	10.5 Conclusion	280	APPENDICES 281	
Appendix A References	281	Appendix B Indicators	283	Appendix C Activity Coefficients() for Ions at 25	285
Appendix D Constants for Acid-base, Complexometric, Redox, and Precipitation Titrimetry	286	Appendix E Molecular Masses	299	ANSWERS	302
INDEX	305	PERIODIC TABLE OF THE ELEMENTS	309		

章节摘录

插图：Gravimetry, based on mass measurement, includes precipitation gravimetry, volatilization gravimetry, and electrogravimetry. In precipitation gravimetric analysis, the mass of the product of the chemical reaction related to the analyte, which is the sparingly soluble and pure precipitate, is measured with an analytical balance. For example, a barium sulfate gravimetric method for determining sulfur content in iron ores is recommended by the International Organization for Standardization (ISO 4689.1986, Iron ores—determination of sulfur content—barium sulfate gravimetric method). After sample preparation, the sulfur in the sample is converted to sulfate, an excess of barium chloride (BaCl_2) is added to an aqueous solution of the sample to cause the precipitation of the sulfate as barium sulfate (BaSO_4). The precipitate (BaSO_4) is then filtered, washed to remove impurities, heated, and weighed to obtain the final mass of BaSO_4 . Precipitation gravimetry is usually suitable for samples with an analyte greater than 1%. Volumetric analysis (also volumetric titration) is a quantitative chemical analysis that is used to determine the unknown concentration of a known reactant. A standard solution is added from a buret to react with the analyte until the titration is complete, i. e., the endpoint is reached as determined by an indicator. In volumetric analysis, the volume measured is used to calculate the concentration of the analyte. For example, a hydrochloric acid (HCl) standard solution added from a buret can be used to determine the concentration of sodium hydroxide (NaOH) in a solution using methyl orange (MO) as the indicator. After the neutralization reaction reaches a point when all the NaOH has just reacted with HCl , an additional very small amount (about one half drop) of HCl changes the final solution from basic to acidic and the methyl orange indicator changes its color from yellow to orange. Volumetric analysis are classified by the type of reactions occurring, e.g., acid-base titration (neutralization titration), complexometric titration, redox titration and precipitation titration.

《定量化学分析》

编辑推荐

《定量化学分析》是由北京大学出版社出版的。

《定量化学分析》

精彩短评

- 1、速度很快，东西也很好，服务态度很好。
- 2、挺好的，送得快。
- 3、作为分析化学学习的必备参考书
- 4、很好，老师讲的都是这里的。内容写的也很好，跟汉语的武汉大学的分析化学内容一样。
- 5、抄的书，不多说，英语更不多说
- 6、还凑合，课本而已，没什么特别的
